DJ Wasabi Soundboard by Amnon Skladman

- 1 Record button records the user's input (via buttons) and plays them in an interval. It will turn red while recording, and go back to blue when not.
- 2 Slider in the middle controls the interval speed.
- 3 Clear button clears the recording and stops playback.
- 4 The buttons in the rows below each play their own sound. Users can manually click them or use keyboard keys.

The slider for adjusting interval speed can be moved left and right.

Clicking on Record will begin recording. The button will turn red, indicating it's turned on.

Clicking on it again will stop recording and change the colour back to blue.
